***Faculty Development Showcase Week:  
Using the Item Analysis to Enhance Test Construction***

**Course Description:**

This is a brief audiovisual presentation designed to introduce faculty to ways to enhance and improve multiple choice test construction using statistical data from the item analysis. The multiple choice written examination is a significant formative and summative evaluation tool for many health professions. Great valid examinations are difficult to construct. Using statistical data from an Item Analysis can provide direction to both novice and experienced faculty members as well as strengthen the reliability and validity of these examinations.

**Course Objectives:**

The participant will:

1. State how to use an item analysis summary to determine the reliability and validity of the examination.
2. Develop and modify multiple choice examination questions
3. Define whether multiple choice questions are strong indicators of student knowledge retention.

**Using Item Analysis to Enhance Test Construction**

**Item Analysis**

Reliability Coefficient

the extent that the test is likely to produce consistent results over time

tests will have greater reliability than tests with fewer items

subject

---

---

---

---

---

---

---

---

**Reliability Coefficient**

Kuder-Richardson-20 (KR-20) is a measure of the internal reliability of a test

tests that have higher reliability coefficients are more reliable

from 0 to 1

---

---

---

---

---

---

---

---

**KR-20 Determined By**

number of test items  
of the responses  
correct  
responses to

### Item Analysis

well-written item  
 of students in the  
 should have selected the  
 in the  
 and each

---

---

---

---

---

---

---

---

### Item Difficulty Level: Definition

Percentage of students who answered the item correctly

High (Difficult)	Medium (Moderate)	Low (Easy)
<= 30%	> 30% AND < 80%	>=80%

---

---

---

---

---

---

---

---

### Item Difficulty Level: Examples

Percentage of students who answered each item = 50

Correct	% Correct	Difficulty Level
30	30	High
50	50	Medium
70	70	Medium
90	90	Low

---

---

---

---

---

---

---

---

### Item Difficulty Level: Discussion

Best question that no one answered correctly? Too easy?

Question on which no one answered correctly? Too difficult?

Question that was answered by 90% of students? "Too easy"?

Question that was answered by 10% of students? Too difficult?

---

---

---

---

---

---

---

---

### What is Item Discrimination?

Generally, students who did well on the exam should select the correct answer for a given item on the exam.

Item Discrimination Index

Item discrimination is the difference in the proportion of students who did well on the exam who selected the correct answer for a given item on the exam.

---

---

---

---

---

---

---

---

### What is Item Discrimination?

Item Discrimination Index is a decimal format and ranges from -1 and 1

Item Discrimination Index is a decimal format and ranges from -1 and 1

Item Discrimination Index is a decimal format and ranges from -1 and 1

---

---

---

---

---
